

## Column documentation

The upload URLs method allows users to scan a list of URLs using the FakeRank API. This method will run through each of the URLs in the list, scan it and return the aggregated results. The results include the FakeRank classification as shown in the Problematic Category and Problematic Domain columns ("Fake News" or not "Fake News") and insights both at the domain and specific-URL content level as described herein.

### Domain vs URL

	Domain	URL
classification insights	Problematic Domain	Problematic Category
	FakeRank	NLP Category
	Content Model	NLP Score
	Failed Fact – Checks Domain	Failed Fact- Checks Content
		Sample Sensitive Content
		Bad References

## Column description

### TAG & URL :

**Level**- URL

**Description**- A unique identifier of the given URL in advance to keep track on the URLs that were sent.

### NA:

**Level**- URL

**Description**- Whether we were able to access the site in the given URL. 1 for fail.

NLP Category & NLP Score & Problematic Category:**Level-** URL

**Description-** The category to which the site belongs and the level of confidence the model is sure of his prediction of the category. Also returns if the content category was identified as problematic.
